Subject: Re newable Energy
Date: Saturday, 3 November 2012 12:35:35 AM

I support the Excessive Noise From Wind Farms Bill 2012
to the Renewable Energy Act;

Our names are:
Wanda and Shane Allott

The noise is like a jet engine hovering above our house especially on northern windy nights.
We feel the vibrations going through the house that includes the bed and even when we sit on he toilet.
When we are in bed the vibrations give us motion sickness and with the noise we are unable to sleep.

When the turbines are facing towards the house we get headaches, ear pressure, balance problems,
Confusion, memory loss,problems putting sentences together, upset stomachs and at night we get
Heart palpitations , the heart takes on the thrummping rhythm of the turbines, increase of anxiety,
on windy days no matter which way the wind blows my husband even gets pressure behinds his eyes'

We find that when we get away from home, like when we go to Clare and do our shopping with in an 1.2 to an hour all our symptoms disappear.
Both of us have had near missies in our cars when we nearly fell a sleep due to severe sleep debrevation.
We know this is due to the wind farm because we did not have these problems before and
when we are away from home we do not have these symptoms and we have spoken to other people
in our town that have the same problems who were also fine before the wind farm.

Regards Wanda and Shane Allott
