Committee Secretary
Senate Standing Committee on Rural Affairs and Transport
PO Box 6100
Parliament House
Canberra ACT 2600

Dear Committee Secretary,

RE: Inquiry into the impact of the Murray-Darling Basin Plan in Regional Australia

I submit to your Committee's inquiry the attached PDF of the Citizens Electoral Council's Dec. 2010/Jan. 2011 edition of the *New Citizen* newspaper, in which I draw the Committee's attention to the feature article on p. 3, 'Land-Clearance' in the Murray-Darling Basin—British Genocide in the 21st Century", as well as the two articles on p. 8: "NAWAPA, Clarence River Scheme Crucial for Global Recovery" and "NAWAPA, from The Standpoint of Biospheric Development".
These articles establish:

- The Murray-Darling Basin Authority and the *Water Act 2007* by which it was created were designed to snare Australia's national food bowl in the international drive to lock up land in conservation zones, taking the land out of food production and out of any sovereign national control.
- The international drive was started and is still led by Prince Philip, and his World Wide Fund for Nature (WWF) and its sister organisation, the International Union for Conservation of Nature (IUCN), whose agenda is definitely not genuine conservation, but rather a repeatedly stated intention to reduce the world's human population to as few as two billion people.
- Prince Philip has personally directed the radical "green" takeover of all aspects of Australian policy through his organisations: the Australian Conservation Foundation (ACF), Sustainable Population Australia (SPA), and the Wentworth Group of Concerned Scientists, which latter group directed every aspect of the process to shut down the Murray-Darling Basin as a food bowl.
- The Wentworth Group's brand of environmental science is a fraud, a genocidal hostility to human beings parading as science; by contrast, the principles of biospheric development constitutes the true science of the environment, and provides the basis for understanding that Australia has immense potential for economic development.
- The proposed Clarence River Scheme would add upwards of 1,000 Gl/y of reliable flows into the Murray-Darling Basin, which would transform the Basin's productive power.

Yours sincerely,

Craig Isherwood
National Secretary/Treasurer
