---

I support the Excessive Noise From Wind Farms Bill 2012  
to the Renewable Energy Act;

Our names are:  
Wanda and Shane Allott

The noise is like a jet engine hovering above our house especially on northern  
windy nights.

We feel the vibrations going through the house that includes the bed and even  
when we sit on he toilet.

When we are in bed the vibrations give us motion sickness and with the  
noise we are unable to sleep.

When the turbines are facing towards the house we get headaches, ear  
pressure, balance problems,  
Confusion, memory loss, problems putting sentences together, upset stomachs  
and at night we get  
Heart palpitations , the heart takes on the thrummping rhythm of the turbines,  
increase of anxiety,  
on windy days no matter which way the wind blows my husband even gets  
pressure behinds his eyes'

We find that when we get away from home, like when we go to Clare and do our  
shopping with in an 1.2 to an hour all our symptoms disappear.

Both of us have had near missies in our cars when we nearly fell a sleep due to  
severe sleep debrevation.

We know this is due to the wind farm because we did not have these problems  
before and

when we are away from home we do not have these symptoms and we have  
spoken to other people

in our town that have the same problems who were also fine before the wind  
farm.

Regards Wanda and Shane Allott
