The following is a summary and some points that I did not express because of lack of time.

These points may help citrus growers achieve viability.

Absolute truth in labelling country or countries of origin on label stating percentage of ingredients for each country.

Food producers to be able to proceed with anti dumping applications.

Simpler collective bargaining rules.

Better testing procedures for imported products in regard to pest and disease, quality standards and human health.

A case study for the importation of Brazilian concentrate into Australia.

Fairness along the market chain legislation.
